

## Bug Report 1

*Created by Teodor Coste*

---

**Title:** Failed Data Upload for Large Files

**Reported By:** Teodor Coste

**Timestamp:** [11:30 AM, April 5, 2023]

---

### Environment:

- **Operating System:** Windows 10
  - **Browser/Application:** Chrome 92
  - **Version:** Data Upload Module v1.3
- 

### Description:

When attempting to upload files larger than 100MB, the data upload feature fails and displays an error message "Upload failed due to server timeout." Smaller files (e.g., 20MB) upload without issues. Expected the system to handle large file uploads smoothly.

---

### Steps to Reproduce:

1. Go to the Data Upload page.
  2. Select a file larger than 100MB to upload.
  3. Click the 'Upload' button.
- 

### Actual Result:

The system starts uploading the file but fails after approximately 60 seconds, showing an error message "Upload failed due to server timeout."

---

**Expected Result:**

The file should upload successfully, or the system should provide a clear message if there's a file size limit.

---

**Severity:** Critical

**Priority:** High

---

**Attachments:**

- Screenshot of the error message.
  - Upload logs from the session.
- 

**Additional Notes:**

The issue occurs consistently with files over 100MB. Tested with various file types (e.g., .pdf, .jpg, .txt). The server log suggests a timeout issue during the upload process.
